NEW! ONE-PASS REPLANTING SOLUTION

When weather or emergence issues threaten crops and yields, the ReSweep™ performs one-pass replanting.

PATENT
PENDING

2965 ReSweep Features

- » Helps with decision-making: replant the whole field or only needed areas
- » Use main planter or a patch-in planter to replant
- » Removes existing plants while placing new seed
- » Saves time, equipment, and fuel expenses
- » Mounts to planter row units or existing planter attachments for easy installation and removal
- » Depth is adjustable to work with planting depth and field conditions

ReSweep replanted areas outperform interplanted sections.

Areas where the ReSweep removed the original crop during replant.

Removing the original crop reduces competition for water and nutrients.
